

There's a
better way
to work
as a team.

TEAMSYNC^{Pro}
Online Collaborative Project Manager & Micronet

Maybe you started as a one-man shop, tracking your jobs in a notebook. As you grew, you managed your work in ever more sophisticated ways. Then one day it hit you: You're not the only one who needs to assign and schedule tasks, track costs, issue reports, and access project-related files.

The big question is: Can you find a project management system that can be used with ease by all of your workers? And what if those workers are in different offices, different cities, even different countries?

Yes. And no problem.

TeamSync™ Pro is a simple-to-use online project manager – housed within a flexible Micronet* – that operates through your web browser. Authorized team members can access, assign, and track any task, event, schedule, discussion, and file related to a project – from anywhere, at anytime.

Unlike conventional software, TeamSync Pro is not installed on your computer or

your network. The application and all of your data is maintained on Cebiz servers. What you get is **pure functionality**, delivered reliably and securely through your web browser – 24/7/365.

TeamSync Pro has an uncluttered and highly intuitive interface, allowing you and your team to start using it immediately – even if you've never before used a project management program. A multi-level permission structure allows you to selectively give access to companies, groups, or individuals, all the way down to the file level.

Having all project information immediately accessible by all from anywhere and at

anytime is more than most managers could ever hope for. But just because information is available doesn't mean it will be used. TeamSync Pro includes an AutoAlert e-mail system that automatically notifies team members of additions or changes to any project information, including task assignments, scheduling, discussions, and posted files. Notifications appear in the recipient's e-mail box as URLs that link directly to the pages with the pertinent information.

As the only comprehensive, team-oriented project manager that is 100% web-based, TeamSync Pro will help you unlock the ultimate profit potential of your business!

**A Micronet is a small network of exactly who you want to see a project. One company could have multiple – dozens, hundreds, or thousands – of virtual enclosed networks (Micronets), each working individually, or tied together as a larger Extranet.*

powered by 

BUDGETING

Configure labor and fixed costs down to the individual worker and task. Team members can add actual costs to the project for up-to-the-minute budget analysis. View and print cost and invoicing reports.

TIME MANAGEMENT

Capture and track time down to the individual worker and task. AutoAlert notification ensures that everyone is on the same page. Corporate and individual calendars display tasks, events, and to-dos.

ASSET MANAGEMENT

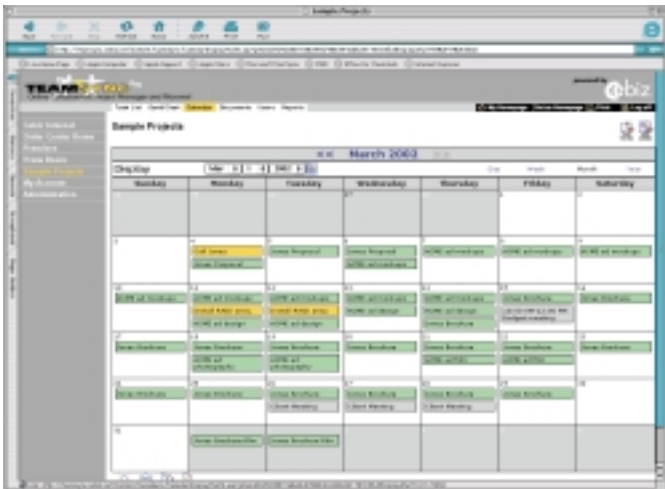

Keep everything in its place and available 24/7/365. Attach folders, documents, images, and threaded discussions directly to any task or project.

REPORTS

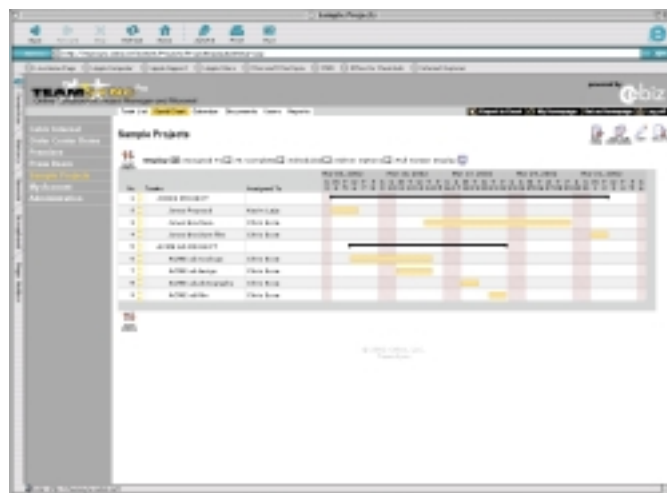

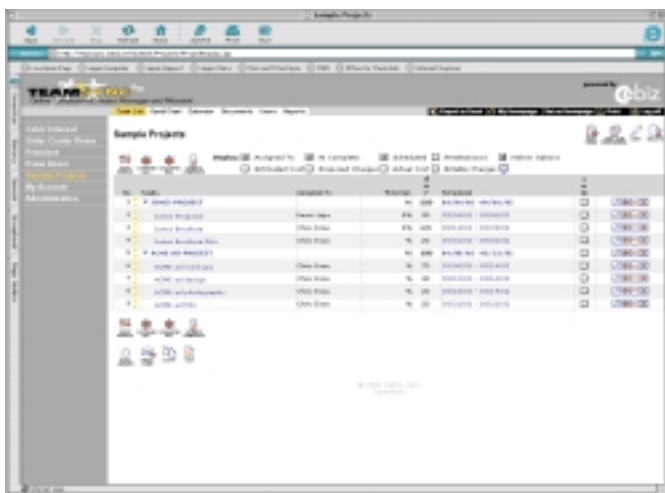

Automatically generate reports – including Budget vs. Cost, and Projected Revenue vs. Billings – for on-screen viewing and downloading. Multi-user Gantt charts can be viewed on-screen and exported directly to MS Excel.

SECURITY

TeamSync Pro is available in a hosted version or as an installed system in your IT center. Selectively give access to companies, groups, or individuals to particular files or tasks. Password protection, multi-level permission structure and SSL secure site provided by VeriSign® ensure your data is always safe and secure.

Calendar (above) shows tasks, events, and to-dos, coded by color. Clicking any item takes you directly to its summary page. Task list (below left) and Gantt chart (below right) have numerous show/hide display options. Both can be exported to MS Excel for printing or file transfer.

Cebiz TeamSync Pro Summary of Features

- 100% browser based
- Micronet (Extranet) environment
- Anytime/anywhere access
- Branded for your company
